

**IN THE SPECIFICATION:**

Amend the specification as follows:

**[0076]** When the ceramic green sheet 20 is picked up, a processor unit (~~not shown~~) **P** (shown schematically in FIG. 1) stores beforehand data concerning the types of, the lamination order of, and the number of ceramic green sheets 20 required to produce a laminate of a desired electronic monolithic ceramic component, and the processor thereby causes the tray 8 holding a required ceramic green sheet 20 to be drawn, and the first chucking device 14 to pick up the ceramic green sheets 20 one by one.
